

## Statement from Colorline regarding vacuum degasser & cavitation

Hello Geir !

We have now used the vacuum degasser approx. 18 month on the colling water system for main engine (4 x Wärtsila 460), at this point we can see that degassing have had a god influence on the corrosive attack at cylinder heads.

After install of degasser we have not scraped or welded any cylinder heads at this time.

Hope we will get the same effect on the hot well for boiler system, when the degasser are installed as well.

Med vennlig hilsen
